

a

--18. The therapy apparatus of claim <sup>10</sup>17, wherein said alarm comprises a second temperature sensor connected to said control electronics for monitoring temperature in said recirculating fluid loop of fluid exiting said therapy pad, said first temperature sensor monitoring temperature in said recirculating fluid loop of fluid entering said therapy pad, said control electronics monitoring said first temperature sensor and said second temperature sensor and producing a signal when temperatures detected by said first temperature sensor and said second temperature sensor indicate that said thermal reservoir has insufficient thermal capacity to maintain a selected therapy temperature within a preset tolerance value.--

Remarks

A new set of claims has been substituted in order to better define applicants' invention for consideration by the examiner. No new matter has been introduced by the amended claims.
